What is a Knowledge Graph?

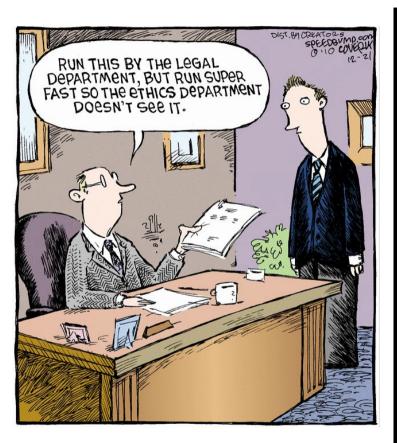

- Knowledge Base used by Google Wikipedia
- What is a Knowledge Base ?
- Store complex structured and unstructured information
- What is a Contextual Knowledge Graph?
- What is a Context? Is it the same as Semantics?
- Does everything defined using <u>semantics</u> become 'knowledge'?
- Are all semantic data graphs also 'knowledge graphs'?

How close are we to redefining the concepts associated with the semantic web such as terms and relations and ontologies going towards knowledge ???

IMHO -> semantics provides a way to define information)

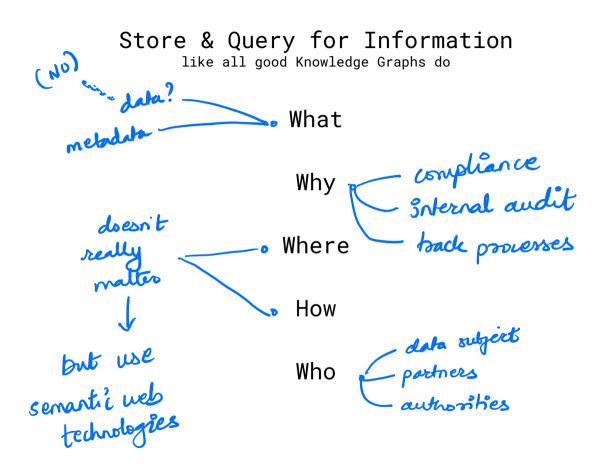

Why do we need a CKG for GDPR?

- 1. More information is associated with compliance than ever before
- 2. This information is inherently linked to other information
 - a. business processes
 - b. activities, entities, datasets, practices, audits
 - c. security
 - d. other laws
- 3. Combine all the information \rightarrow Generalise
- **4.** Extract contextual information \rightarrow Specialise
- 5. Flexible to expand and include more information

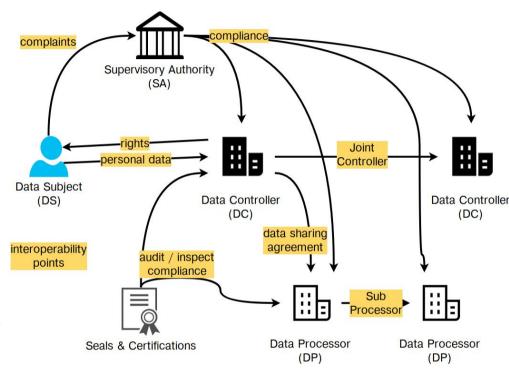

Sources / Actors / Agents

- 1. Data Subject
- 2. Data Controller
- 3. Data Processor
- 4. Certificate Authority
- **5.** Supervisory Authority Regulatory Body

GDPR Intersperability Model EURAS 2018

Provenance

lifecydes

- Consent
- shared activities, Data Sharing Agreements obligations
- Certification
- Compliance

document -> demonstrate

Question:

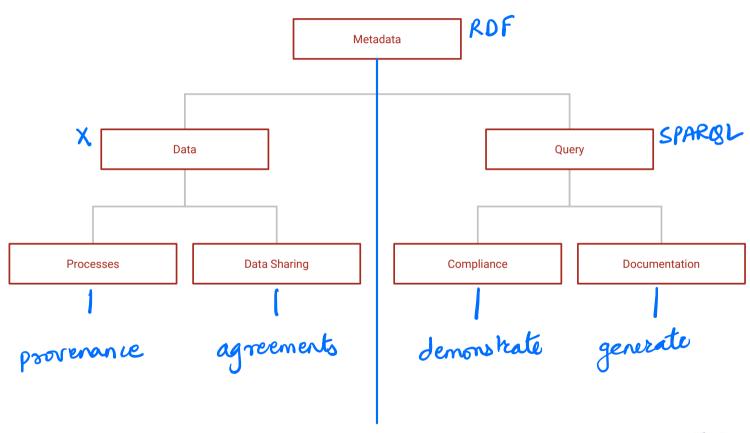

What level of conceptual mapping should queries use/expose to the underlying data model?

Answer:

Depends on the Actor/Agent and their specific needs
